E1 ISOLATION BASE

“The E1 Isolation Base is for customers who want true HRS performance in a very cost effective design configuration. The E1 uses the latest primary isolation stage technology found in our more expensive models combined with a new proprietary HRS constrained layer damping plinth that provides excellent performance and unique value for our customers.”

*Michael Latvis, Chief Engineer
Harmonic Resolution Systems Inc.*

The **E1 Isolation Base** is a highly innovative design that eliminates noise, revealing a new level of musical performance. It is manufactured from seven different materials, including a proprietary resonance control stage, billet machined aircraft quality aluminum front trim and a new HRS constrained layer damping resin composite plinth. The E1 load range is matched to the component weight for maximum performance using the same technology found in our high performance reference level designs. The E1 can also be modified in the future to adjust for different component weights and different component types.
